

## Investing in Solar Energy (in Spain)

**"The investment in photovoltaic solar energy is very safe since the sale of energy produced is guaranteed and regulated"**

According to Royal Decree 661/2007 and 1578/2008, the distribution utilities are obliged to purchase energy produced by renewable energy installations at a price that is already established or "tariff."

The tariff is guaranteed for the first 25 years of operation and prices of the tariff shall be updated annually based on CPI (-0.25% to -0.50% 2012 and from 2012) until age 25 years.

The State, the Autonomous Communities and the European environment, are betting on renewable energy, so that the investment in photovoltaic energy has significant advantages and tax benefits. Investment safe before, as the stock, construction or real estate, have ceased to be.

INSOLATIO such as consulting and engineering in energy saving and efficiency, we propose to approach a business opportunity reliable, cost effective, clean and safe.

INSOLATIO promotes private investment and implementation of facilities covered and industrial roofs in the area of "Levante Peninsular". Participate in these excellent conditions:

Power: 100KW

Guaranteed minimum return: 7.5%

Terms: industrial roof on deck or in rental

Estimated investment per project: € 450,000

Duration of the contract of sale of electricity: 25 years

WARRANTIES: Ratios of production included in the contract.

Extend information and participate in the most profitable investment of time.
